LANGUAGES

- Languages
- Arabic: Native
-
- English: Fluent (written and spoken)

SKILLS

- Languages: JavaScript, TypeScript, Python
- Front-end: HTML, CSS, React, Next.js, Tailwind CSS
- Back-end: Node.js, NestJS, GraphQL, TypeORM, Apollo
- Databases: MongoDB, PostgreSQL
- DevOps Tools: Docker, Git/GitHub, Kubernetes, Jenkins, Linux, AWS
- Testing: Jest, Cypress

PROFESSION SUMMARY

A full-stack software developer with experience building modern web applications using React, Next.js, and NestJS. He has experience developing high-performance systems with seamless user interfaces. He is passionate about improving user experience, applying programming best practices, and leveraging DevOps tools. He has a particular interest in GraphQL, security, and scalable architectures.

WORK EXPERIENCE

2023 - PRESENT

- **A fully integrated e-commerce platform for the US market using the latest web technologies**

We developed a fully integrated US e-commerce store dedicated to serving the US market only, with a focus on performance, security, and user experience.

The front-end was built using React.js and Next.js with Tailwind CSS to provide a smooth and fast browsing experience, powered by SSR technologies to improve page load speed by 60%.

On the backend, we used Node.js and NestJS with GraphQL and Apollo Server to create robust and efficient APIs, reducing duplicate database queries by 40% using PostgreSQL and managing data via TypeORM.

The platform's security is advanced against XSS, CSRF, and SQL Injection attacks, with JWT authentication to secure user sessions.

To ensure high performance, the frontend is deployed on Vercel, and the backend is deployed on Heroku/Render, ensuring high availability and optimal response time for US market customers.
